The Cloud DBA Solution

Minding your data landscape
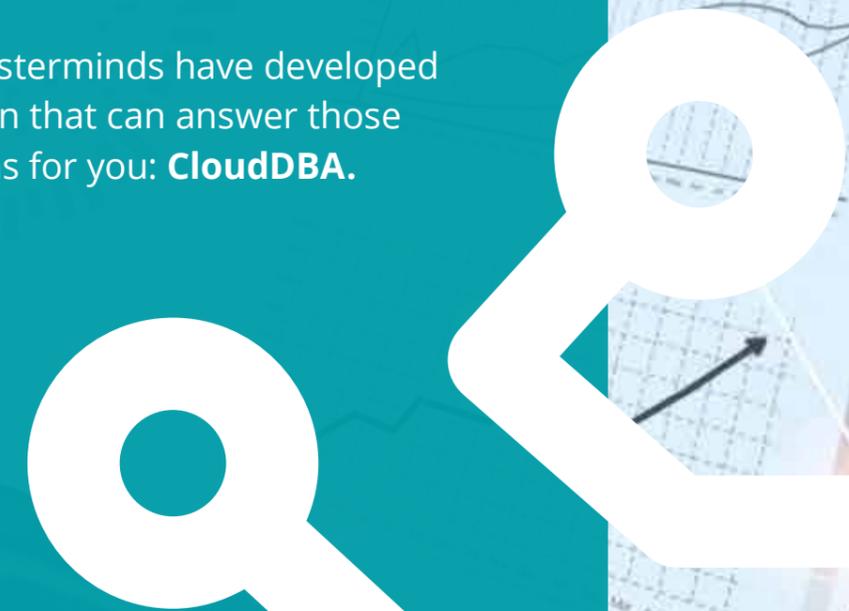

We mind your data while you mind your business.

get the
most out
of your
data

Data is fast becoming one of the most important assets of any organization. It's used to improve quality, optimize commercial performance and even to drive cars. But data also brings its own unique challenges. How do you know your data is stored correctly? Is it available quickly when you need it? Are your data and data handling systems compliant with current and upcoming legislation?

Data Masterminds have developed a solution that can answer those questions for you: **CloudDBA.**

DATAmasterminds

We mind your data while you mind your business

Your solution?

CloudDBA

The CloudDBA service is designed for clients that are looking to either enhance their internal IT team through external experts, or to replace missing resources where they cannot be sourced in the data platform area. CloudDBA is a fully managed service by Data Masterminds that helps your organization keep its data secure, compliant to best practices and standards, and always available when your organization needs it.

CloudDBA Base Service

The CloudDBA Structure

CloudDBA Base Service
The CloudDBA Base Service provides a solid basis for any company, either with or without their own team of data professionals. Wherever it is hosted, our service ensures the safe and healthy operation of your organization's data. Through a mixture of automation, monitoring and remote management, your data environment is regularly checked to incorporate industry standard best practices and provide regular data maintenance.

Data warehousing module
The data warehousing module expands upon the CloudDBA Base Service to support the design and implementation of data warehouse solutions. Some of the activities that are added through this module are the monitoring of Extract, Load and Transform (ETL) processes, support for your Business Intelligence team, performance tuning, and architecture advice for your data analytics environment.

Development module
The development module is aimed at helping your developers get the most out of your data. Through the module we support your development team with writing better queries, optimizing query performance and implementing continuous integration and continuous delivery to optimize your development processes.

Architecture module
The architecture module is the top-level CloudDBA service that provides greater integration into your company. It introduces training and mentoring for your developers, database administrators and Business Intelligence teams. It also provides advice and implementation of data migrations to the cloud or on-premises, and delivers support for environment upgrades.

No Surprises
No matter which CloudDBA modules you choose, we perform all the listed activities and services through a fixed, monthly fee. This means we will never charge extra, no matter how long the task takes. Running into extra work that isn't covered by the CloudDBA modules you selected? No problem. You can add additional modules to the CloudDBA services whenever you want.

Why should you choose CloudDBA?

Monitoring
Be 100% worry free knowing that your database environment is in good hands. It is monitored 24/7, and you will be notified of some problems before they even occur.

Performance tuning
Is your application slow? Don't know where to start troubleshooting? We can work with you to optimize your database environment.

Training and mentoring
Bespoke private training based on your environment and employee needs, as well as long-term mentoring to improve organizational skills and knowledge.

Healthcheck
Curious about the state of your database environment? Want to ensure compliance with the latest standards and regulations? The Healthcheck provides the answers to these and many more questions.

Lifecycle management
Bring your databases under source control and automate all your database deployments as a part of the Application Lifecycle Management (ALM) process.

Developing
Don't have a database developer in your team or want to increase the database skills of your developers? We offer custom training and coaching.
